AGE CALCULATION MINI-PROJECT

Personal Project / Built using LOGICAL ALGORITHMS

- Developed a Java program to calculate age in years, months, days, and minutes without using built-in date/time functions.
- **Working**
 - Implemented logic for leap year and century year handling to ensure precise day counts.
 - User inputs birth date and target date/year for which age is to be calculated.
 - Algorithm computes total days lived, then derives months, years, and minutes through manual calculation.
